Key words: hypochondriac personality disorders, professional tolerance of an individual, psychosomatic health, profession, sociometric dimension.

The article is concentrated on the preconditions for the emergence of hypochondriac personality disorders. The author conducted theoretical and methodological analysis of the problem of maintaining a person's professional tolerance in the sphere of professional activity and outlined the directions of this phenomenon in psychological literary sources. The research investigates the problem of the correlation between a person's professional activity and their psychosomatic health in the situation of hypochondriac disorders.

The author introduces the results of studying the firm individual and typological personal characteristics of people suffering hypochondriac disorders. The article dwells on the tendency of indications according to the parameters of differential approach towards the varieties of the symptoms which give grounds for predicting further personal development and ways of its correction.

The author describes a hypochondriac personality type which is characterized by a person's concentration on the subjective negative feelings and the desire to announce them to other people creating the aura of sympathy and pity. The article emphasizes a person's selfish intentions regarding saving them and the conformity of their life. The author draws a psychological portrait of a person suffering hypochondriac disorders of somatoform type for the elaboration of an algorithm for chronobiologic prognosis of psychosomatics, clinical course, treatment efficiency and optimization of adaptive abilities of patients suffering hypochondriac disorders.
